

WE MAKE MICROBES MIGHTY

CrabLife™

More muscle for your crop production

By providing existing soil microbes with food and energy, CrabLife™ naturally and safely improves soil health by enhancing the beneficial microbial community in the soil so plants can thrive. The key ingredient is naturally derived crustacean meal. Scientifically proven to stimulate the soil microbiome, particularly microbes associated with the biological control of plant pathogens and parasitic nematodes, crustacean meal improves soil health for greater root and plant vitality. Adding CrabLife to an existing production program increases nutrient uptake and root development, for increases to stress and maximum crop yield across various growing locations and soil types.

Enhanced broad
spectrum beneficial
microbials

Improved soil
quality

Better root
development

Greater plant
vitality

Increased
yield

Increased yield

Better stress resistance

Cost effective

Enhanced nutrient uptake

Better root development

Helps rejuvenate roots post-harvest

Enhanced beneficial soil microbial community

Additional source of calcium for the soil

Improved soil quality

Application

CrabLife application rates begin at 300 lbs. per acre for CrabLife Flake and CrabLife Plus, which are applied directly to the soil and incorporated to a depth of 6 inches as a food source for beneficial microbes and crop plants. CrabLife Powder is applied at 40 to

80 lbs. per acre as a soil drench or side dress to help optimize root growth and marketable yields. Proper tank agitation is required for CrabLife Powder applications to keep the product in suspension.
